## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-20 are allowed.
2. The following is an examiner's statement of reasons for allowance: the prior art searched and cited failed to teach or fairly suggest a collector optic assembly for collecting radiation, the said assembly having an elliptical meniscus machined from a single piece of silicon and being fused to the heat exchanger by a glass frit bonding process, the said meniscus including a front reflective layer and an inlet manifold and an outlet manifold machined from a single piece of silicon and being mounted to the heat exchanger, said outlet manifold including at least one outlet channel in fluid communication with the heat exchanger cooling channels in combination with the remaining elements of claims 1 or 8. Claims 2-7 and 9-15 are allowable because of their dependencies upon claims 1 or 8.
3. The prior art searched and cited also failed to teach or fairly suggest a method for assembling a collector optic for collecting radiation, the said method having steps of machining an elliptical meniscus from a single piece of silicon so that the meniscus has a front surface and a back surface; depositing a reflective outer layer on the front surface of the meniscus, and fusing the back surface of the

meniscus to the heat exchanger by a glass frit bonding process in combination with the remaining elements of claim 16. Claims 17-20 are allowable because of their dependencies upon claim 16.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### *Conclusion*

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US patents; 6,738,452 (McGregor et al), 6,285,743 (Kondo et al), 5,209,291 (Taylor) and US patent publications; 2002/01415336 (Richardson, 2004/0086080 (Orsini et al). All of the cited US patents contain art similar to that being claimed by applicant, more specifically, EUV collectors and target sources.
